

Colocation

Secure and Flexible as you would expect

EXA Infrastructure operates Colocation facilities in Europe and North America, fully integrated into the EXA network, including 14 carrier neutral Tier3 equivalent data centers. We take pride in offering "ultimate flexibility" for configuration of space, power and connectivity options. We offer industry standard cabinets and cages, data centre modules, and bespoke 'land and power' packages for unique deployments, such as a flexible Edge solution to bring you closer to your customer.

Why EXA Colocation?

EXA can provide remote hands and eyes and cabling services at all our colocation facilities. EXA offers modular and flexible data centre solutions tailormade to integrate with EXA's low latency, high bandwidth connectivity.

Benefits for the Client

- Resilience and flexibility
- Standard and custom cabinets, racks, and footprints to suit your needs
- Private suites and cages to fit more demanding requirements
- Remote hands & eyes to support your business with our technical knowledge, so you don't have to
- Cabling: EXA optimizes cabinet cabling to ensure your cabinets have the right airflow and correct cable routing
- Top-of-the-line technology to enable your peace of mind
- Access and security
- High availability
- Flexible service offering
- Global Network Access: carrier neutrality, combined with access to EXA's global network for hyper connectivity
- NOC and local field teams offer fast repairs and provide high availability for our customers
- Private network build services: EXA designs, builds and operates duct and cable infrastructure based on bespoke customer's requirements possibility for site or network connections

Key Features:

- ¼, ½ or Full (multiple) cabinet or server rack space
